SKILLS

LANGUAGES

- Rust
- C++
- Python
- Java
- C#
- Ada
- JavaScript
- TypeScript
- Kotlin

RUST & SYSTEMS

- WebAssembly
- FFI / C interop
- Linux
- Embedded

DOMAINS

- Backend & APIs
- 3D graphics & rendering
- Embedded systems
- Machine learning

TOOLS & PLATFORMS

- Agentic Coding
- Azure
- DevOps / CI-CD
- Git
- Linux
- OpenGL

LANGUAGES

Swedish	Native
English	Fluent
German	Basic

HOBBIES

- Guitar
- Working out
- Motorcycles
- Reading
- Donald Duck

PROFILE

Software engineer who likes coding in Rust, with professional experience building Rust backends on Azure and a strong background in C++, Python, and 3D graphics. Used to regulated and security-sensitive environments through medical software at Mylab and defense products at Saab, with DevOps, CI/CD, and Linux experience. Contributor to open source (Inviwo, Bevy). Curious about technology overall, having built things ranging from embedded firmware to GPU shaders to full-stack backends. Through my own company *Ankrosoft AB* I built products such as a fullstack math learning app in Rust/WebAssembly and a Rust embedded motorcycle controller for map apps.

WORK EXPERIENCE

Software Engineer / Technical Architect | Mylab 2025 Apr – Present

Development of medical software, DevOps and contributing to architecting renewal of codebase. I also migrated the company from subversion to git in Azure and modernized our team's entire workflow. Also architeching and developing new features.

- DevOps, CI/CD, Azure, Architecture, Agentic Coding, JavaScript/TypeScript, Git

Software Engineer | Ankrosoft AB 2025 Aug – Present

My own company where I can take short-term contracts and develop my own software products, including a fullstack Rust web app and a Rust embedded remote for use on motorcycles.

Rust Backend Engineer | ThirdAct 2024 Nov – 2025 Apr

Built Rust backend services accelerating interactions with Azure Cosmos DB across large datasets and multiple APIs; created a scheduling and availability library.

- Rust, Azure, JavaScript, APIs

Software Engineer | Saab 2024 Jun – 2024 Nov

Maintained and developed software for underwater products.

- Ada, Pascal, Linux, CI/CD

Research Assistant Engineer | Linköping University 2022 – 2023

Contributed to Inviwo, an open-source scientific visualization framework in C++ and OpenGL.

- C++, Python, OpenGL, 3D rendering

Software Engineer & Electronics Assembly | Easy Laser 2018 – 2022

Assembled laser-based measuring devices full-time pre-university; developed software part-time during studies.

- C#, Python, Electronics

PROJECTS

E-Paper Dashboard 2025

Self-built e-paper information dashboard: Rust firmware on an ESP32, hand-soldered electronics, 3D-printed housing.

Rust · ESP32 · Embedded

Interactive WASM Raytracer 2025

Interactive raytracer built while exploring AI-agent-assisted coding.

Rust · 3D graphics · WASM

RC Car Visualization in Mixed Reality 2024

Master's thesis: real-time visualization and control of an RC car in Mixed Reality, with contributions to the open-source Bevy Engine.

Rust · C · FFI · Mixed Reality · Open source

Guitar Tablature App 2023

Parses MusicXML into guitar tablature with audio playback.

Rust · Audio · WASM

EDUCATION

MSc, Technology of Media | Linköping University 2024

Specialized in computer graphics and AI, with emphasis on mathematics, graphics rendering, and GPU computing. Awarded a scholarship for academic performance.
